Event Promotion

Jacob McGivern (Manager)
Sheena Patel (Manager)
Neelima Pandey (Lead)

Why Address the Problem

Problem

HAAG's research, interdisciplinary collaborations, and member achievements are often only visible within the immediate group.

Solution

A consistent LinkedIn presence will help recruit future researchers, computational advisors, and potential collaborators!

Target Audience

Current Georgia Tech students, OMSCS alumni, and computational advisors or PhD students from external universities

Method

Develop standardized procedures and reusable templates so future teams can create consistent content with minimal onboarding

What Goes Out on LinkedIn

Project Spotlight

Showcase ongoing research
PROJECTS HAAG is doing

Faces of HAAG

Highlight **RESEARCHERS** and the
people behind the work.

Event Promotion

Promote seminars, workshops, and
community engagement showing
ACTIVENESS of HAAG

Blog Posts

Feature successful
COLLABORATION with
organizations beyond Georgia Tech.

Context and Goals

The problem we addressed

Right now, it is not very clear where the feedback is being sent, how to be able to access it, and what the steps are to follow afterward.

The scope of our work

Faces of HAAG and Project Spotlight — two LinkedIn content streams, each with its own template, tracker, and post-feedback process.

What each template is for

Project Spotlight

To act as a template and provide guidelines for generating a “Project Spotlight” post on LinkedIn for the HAAG organization.

Faces of HAAG

To act as a template and provide guidelines for generating a “Faces of Haag” post on LinkedIn for the HAAG organization.

This pipeline even includes blank placeholders for specific steps of the pipeline so that anyone could use this template and follow it with limited oversight.

Work Completed

Project Spotlight

LinkedIn Post Template / Script

A four-phase pipeline with blank placeholders, fill-in-the-blank tracker fields, and worked examples.

Post Feedback and Approval Process

A dedicated process to use for every single draft before anything gets posted on LinkedIn.

Implementation Pilot

The process tested on a written draft, with outcomes, limitations, and next steps recorded.

Faces of HAAG

LinkedIn Post Template / Script

A four-phase pipeline with blank placeholders, fill-in-the-blank tracker fields, and a worked example.

Post Feedback and Approval Process

A dedicated process, including temporarily adding the featured person to the channel.

Implementation

Not yet piloted this semester. Planned across a fully revised procedure — see next steps.

01 Faces of HAAG

Procedure, implementation status and reflection

Procedure — The Standard Pipeline

Why this procedure exists

The objective of the Faces of HAAG document is to act as a template and provide guidelines for generating a “Faces of Haag” post on LinkedIn for the HAAG organization.

This procedure exhibits a pipeline with four phases. These four phases are comprised of sourcing, content, collection, translation, and promotion.

1

Sourcing

Selection of a person within the HAAG organization.

2

Content Collection

Perform outreach and do a short Q&A session.

3

Translation

Translate the answers from the Q&A session into a LinkedIn post.

4

Promotion

Publish the post, tag it, and do a follow-up.

Before the LinkedIn post gets published, there must be someone other than the writer of the post who will check the tags and accuracy of the post.

Phase 1 — Sourcing

How to source a person

Choose a researcher, advisor, or faculty member. The candidate can also be a new team member speaking on why they joined HAAG. Candidates can also be pulled from HAAG leadership/project-lead recommendations, the HAAG project registration sheet, and the HAAG Summer Enrollments spreadsheet.

Finally, also preserve an ongoing list of future projects and candidates to have a sustainable content pipeline, along with keeping track of who and which project has already been spotlighted or opted in or out.

Fill In the blanks — Candidate / Project Selected

Name of Person: _____ Point of Contact: _____

Sourced From: ☐ Faculty Recommendations ☐ HAAG Project sheet list ☐ Other: _____

Agreed to Participate: ☐ Yes ☐ No ☐ Undecided

Phases 2, 3 and 4 — Collect, Write, Promote

Phase 2 — Content Collection

The basics — Who are you, in 1–2 sentences?

The why — What drew you to this research?

Who's involved — Who do you work with at HAAG?

The milestone — What's something you're proud of recently?

What's next — What's next for you?

Visual — A photo of you.

Phase 3 — Translation

Hook — One line about you, in your own words.

Body — Your background and what draws you to the work.

Credit line — Tag yourself, this one's about you.

Close — A personal note, what's next for you.

Visual — A photo of you.

Phase 4 — Promotion

Publishing is the midway point, not the finish line.

Tagging — Tag the person.

Resharing — They share it themselves, in their own voice.

Engagement — Invite HAAG Slack to engage; someone from HAAG responds to comments.

Reuse — Eligible as a baseline for a future blog post.

Post Feedback and Approval Process

Please use this post feedback and approval process for every single draft before anything gets posted on LinkedIn.

- Step 0** The person getting featured in the Faces of HAAG will be temporarily added to the post-feedback slack channel to provide feedback on the draft revisions.
- Step 1** Upload the draft inside the #post-feedback channel in Slack. Please use the dedicated folder for the uploads of the drafts.
- Step 2** Then make an announcement in the #post-feedback channel when the draft is ready, along with providing instructions for how to make comments within the draft.
- Step 3** Make sure to allow a 48-hour period for annotations, revisions, and feedback about the draft.
- Step 4** Review and gather all the feedback by having a thread attached to the draft. This is for keeping the feedback organized and to reduce the number of DMs.
- Step 5** Finally, the writer of the draft will review and analyze all the feedback received by editing and updating the draft.

Once the 48-hour period is complete, the draft must be approved by Bree, faculty, or a team leader before the draft is posted on LinkedIn.

+ Add item													

Implementation Status and Next Steps

Implementation status — not executed yet

The semester's implementation was executed inside the content stream of the project spotlight for HAAG. The Faces of HAAG template and its post-feedback process were built, but no draft was written or run through the process this semester.

What this means for effectiveness

Because the procedure has not been tested from start to finish, determining the overall effectiveness of this procedure is unauthenticated.

Next steps for future HAAG members

1

Run the first Faces of HAAG draft

Plans to implement the next drafts of the faces of HAAG stream contents across a fully revised procedure, and test whether the drafts get feedback within 48 hours.

2

Build the candidate list

Preserve an ongoing list of future candidates to have a sustainable content pipeline, along with keeping track of who has already been spotlighted or opted in or out.

02 Project Spotlight

Procedure, implementation, outcomes and reflection

Procedure — The Standard Pipeline

Why this procedure exists

The objective of the Project Spotlight document is to act as a template and provide guidelines for generating a “Project Spotlight” post on LinkedIn for the HAAG organization.

Our pipeline has four phases for the project spotlight: Sourcing, Content Collection, Translation, and Promotion.

1

Sourcing

Selection of a project or person within the HAAG organization.

2

Content Collection

Perform outreach and do a short Q&A session.

3

Translation

Translate the answers from the Q&A session into a LinkedIn post.

4

Promotion

Publish the post, tag it, and do a follow-up.

Before the LinkedIn post gets published, there must be someone other than the writer of the post who will check the tags and accuracy of the post.

Phase 1 — Sourcing

How to source a project

Curate a project within the HAAG organization that has recently achieved a milestone or has accumulated momentum. Aim to target experienced faculty, researchers, and advisers, etc. who are part of that specific project. This is so that they can give answers and provide details about the project.

Finally, also preserve an ongoing list of future projects and candidates to have a sustainable content pipeline, along with keeping track of who and which project has already been spotlighted or opted in or out.

Fill In the blanks — Candidate / Project Selected

Title of Project: _____ Primary Contact: _____

Sourced From: ☐ Faculty Recommendations ☐ HAAG Project sheet list ☐ Other: _____

Agreed to Participate: ☐ Yes ☐ No ☐ Undecided

Phases 2, 3 and 4 — Collect, Write, Promote

Phase 2 — Content Collection

The basics — What is the project, in 1–2 sentences?

The why — What problem is it solving?

Who is involved — Who is involved?

The milestone — What is the latest milestone?

What is next — What is next for the project?

Visual — A photo, figure, or image.

Phase 3 — Translation

Hook — One plain-language line, what the project is.

Body — What it does, why it matters, the milestone.

Credit line — Tag everyone involved, members and collaborators.

Close — A forward-looking line, inviting follow-up.

Visual — One photo, figure, or diagram.

Phase 4 — Promotion

Tagging — Tag all who's involved (researchers, faculty, institutions).

Resharing — Post it and ask everyone involved to reshare within the first couple of days.

Engagement — Urge team members to expand on the post; members from HAAG responds to comments.

Reuse — Eligible as a baseline for a future blog posts.

Post Feedback and Approval Process

Please use this post feedback and approval process for every single draft before anything gets posted on LinkedIn.

- Step 0** The author of the draft will be invited into that specific research group's slack channel to start the edits of the post draft.
- Step 1** Upload the draft inside the #post-feedback channel in Slack. Please use the dedicated folder for the uploads of the drafts.
- Step 2** Then make an announcement in the #post-feedback channel when the draft is ready, along with providing instructions for how to make comments within the draft.
- Step 3** Make sure to allow a 48-hour period for annotations, revisions, and feedback about the draft.
- Step 4** Review and gather all the feedback by having a thread attached to the draft. This is for keeping the feedback organized and to reduce the number of DMs.
- Step 5** Finally, the writer of the draft will review and analyze all the feedback received by editing and updating the draft.

Once the 48-hour period is complete, the draft must be approved by Bree, faculty, or a team leader before the draft is posted on LinkedIn.

Implementation — Post-Feedback Process Pilot

This pilot was the only implementation attempt carried out this semester across either content stream.

Procedure implemented — the concept

The channel #postfeedback is in the HAAG Slack channel. To receive feedback about a project spotlight draft or faces of HAAG draft, leave a draft of the document in the #post-feedback channel. Every draft will be in a single folder that contains the draft itself along with any feedback that is relevant to it.

The announcement

There will be an announcement format that will be implemented to act as a notification for the new draft to be reviewed and analyzed.

The 48-hour protocol

There will be a protocol of having 48 hours to receive feedback about the draft. This protocol will help maintain and retain the cycle of review and feedback proceeding.

Context and Participants

Where it was executed

Executed inside the content stream of the project spotlight for HAAG. This is also part of a broader content pipeline for LinkedIn. For the implementation, we tested out the procedure by writing out a draft of a project spotlight called “Predicting Railroad Crossing Delays with Machine Learning”.

The project we spotlighted

The researchers who are part of this project were Leonardo Savasta, Xu Che, and Isaac A. Felix.

The participants of the implementation for this test procedure were Sheena and Neelima.

Sheena

Sheena wrote out, edited, and revised the draft of the post.

Neelima

Neelima provided the source material and documents that needed to be edited.

Implementation Approach

1

Neelima provided the source material

The team head, Neelima, provided the source material and Word documents along with her edits for the draft.

2

Sheena wrote and revised the draft

Sheena wrote out the draft for the Project Spotlight post. Sheena reviewed, analyzed, and made edits to Neelima's Word document. After that, she rewrote the post for the Project Spotlight.

3

The draft was posted for feedback

The draft is posted in the #Postfeedback Slack channel; however, no feedback was received or provided throughout this experimentation.

4

The team redesigned the process

The entire team, composed of Sheena, Neelima, and Jacob, had detailed discussions on how to improve the process of receiving feedback on a post draft.

What those discussions produced

This led to creating the current idea of having a procedure where the draft gets posted in the #post-feedback Slack channel, with one folder created and assigned to each draft, a consistent way of announcing when drafts get posted, and a 48-hour period to allow for enough time for proper feedback response.

Outcomes and Evidence

The draft

A draft of the project spotlight was fully written out, and it was finalized once Sheena incorporated the edits that Neelima made.

The feedback attempt

When attempting to get feedback for the project spotlight post draft, there were no responses. By having no responses for the draft, this shows that there was a problem that needed to be resolved and addressed.

What we changed as a result

We revised the procedure of the implementation cycle by making sure the draft gets posted onto the #feedback Slack channel, creating an announcement format, and providing a 48-hour window for receiving feedback on the draft post.

Effectiveness

What worked

The collaboration with Neelima on the project spotlight test experiment worked successfully through the creation of a draft that was finalized and is ready to be posted on LinkedIn.

What did not work

Receiving feedback on a draft presented was challenging and not successful because there were no clear guidelines and protocols for receiving feedback on a draft post.

How the revision addresses it

The improvements to the post feedback structure properly handle the issue between receiving feedback, making protocols on how drafts get announced, and setting a clear deadline on when and how to receive feedback on the post draft.

Overall, the effectiveness of the improved version has not been validated and needs to be assessed during the next post draft cycle.

Next Steps

1

Test the fully revised procedure

Plans to implement the next drafts of the project spotlight or faces of HAAG stream contents across a fully revised procedure, and test whether the drafts get feedback within 48 hours.

2

Finalize the announcement protocol

Conclude the criteria of the announcement protocol for new post drafts in the #post-feedback channel of Slack.

3

Validate the 48-hour window

Plan to review and assess if the 48-hour response period matches and works well with the organization's real response trends.

The most recent and revised procedure has not been tested from start to finish, so the next post draft cycle is where it gets assessed.

Proof of Work — The Draft We Produced

Predicting Railroad Crossing Delays with Machine Learning

The Hook

The fact that people wait at railway crossings has an impact on public transit, commuters, and emergency services; in busy shipping cities like Charleston in South Carolina and Savannah in Georgia the ability to predict these delays can contribute to a safer and more efficient transportation system.

The Challenge

Getting reliable data on traffic bottlenecks is difficult since the information is generally obtained from sensors which never have complete accuracy or from incomplete reports regarding bus operations. The team hope to find out whether machine learning can still produce useful predictions in such real-world circumstances.

The Methods

The Bayesian Hierarchical Model will use the bus inference data to estimate the probability that a railroad crossing will be blocked. The Gradient Boosting Model will use the TrainFo sensor data to predict both the probability and the duration of blockages. Spatial and Statistical Analysis makes use of GIS visualization, correlation analysis, and statistical significance testing.

Proof of Work — Results and Close

The Results

The sensor data from TrainFo is available at only a few railroad crossings. At some of the crossings the sensor readings are so noisy that a reliable analysis cannot be carried out. The information obtained from bus inference data does have value, but it is affected by the bus routes and by the surrounding traffic.

Looking Ahead

In future research the focus will be on comparing camera data with sensor observations in order to detect noise, using GPS and bus data to separate the signal from the noise, looking into further hierarchical modelling techniques, and improving the predictions as to both the duration and the probability of blockages.

The Close

To sum up, the secret to more intelligent transportation is more intelligent data; this project promotes the development of transportation networks that are safer, more resilient, and more efficient by integrating transportation science, spatial analytics, and machine learning.

Credit: Isaac A. Felix, Leonardo Savasta, and Xu Che, Georgia Institute of Technology.

Critical Blocker

This step was formally identified and declared as a primary blocker for the blog post implementation workflow.

Outreach & Coordination

Riyam compiled a list by looking at Slack profiles of external comp advisors and calendar meeting invites.

Onboarding Integration

Recruitment initiatives require accurate personnel records integrated directly into the structured onboarding process.

Finding Media Contacts at External Orgs

1. Mike Krapfl — News Writer, News Service

- **Org/Unit:** University Marketing and Communications, News Service
- **Verified Email & Link:** mkrapfl@iastate.edu — <https://www.news.iastate.edu/about>
- **Role:** Covers natural sciences, engineering, and research centers/institutes university-wide — writes the press releases that outside outlets pick up.
- **Strategic Fit:** **Top-tier primary target.** His beat is literally "engineering and research" — a computer vision project is squarely in his lane for a university-wide news release.

2. Angie Hunt — News Service Director / University Spokesperson

- **Org/Unit:** University Marketing and Communications, News Service
- **Verified Email & Link:** amhunt@iastate.edu — <https://www.news.iastate.edu/about>
- **Role:** Oversees News Service operations and media relations; handles administrative coordination for release timing and media training.
- **Strategic Fit:** Secondary contact — useful if Krapfl is unavailable or if the story needs escalation/media-training support for a faculty spokesperson.

3. Kristin Guess — News Writer, News Service

- **Org/Unit:** University Marketing and Communications, News Service
- **Verified Email & Link:** kguess@iastate.edu — <https://www.news.iastate.edu/about>
- **Role:** Covers design, lecture series, and **student success stories.** ←
- **Strategic Fit:** Strong secondary fit if your angle emphasizes **student researchers** (e.g., OMSCS/grad student contributions) rather than the faculty PI.

The Old Way

Hours spent digging through confusing university directories.

The AI Way (New)

Use a pre-made attachment prompt and add target organization & topic.

Yields 5 verified contact names, positions, and emails.

Tested Validation

Successfully tested and verified with Iowa State University and computer vision project.

External Event Promotion - Procedure

01

Identify & Track

Log event details (Topic, Date, Presenters) in the Slack External Events Tracker.

02

Gather Details

Request a high-quality visual or headshot from presenter via Slack/email.

03

Draft Post

Write attention-grabbing hook, body, tags, and call-to-action utilizing tracker info.

04

Review & Publish

Verify facts with presenter, post in #post-feedback, get approval, then publish live.

05

Promote Internally

Share live link on internal Slack channels and encourage team engagement.

06

Post-Event Follow-up

Draft and share a celebratory follow-up post highlighting key accomplishments.

07

Complete Tracker

Mark the event as completed in the tracking list for record keeping.

External Event Promotion - #Post-Feedback Process

01

Presenter Verification

Verify draft text, technical details, and visuals with presenters for accuracy.

02

Presenter Onboarding

Bring presenters into the private #post-feedback Slack channel.

03

Alert Admins

Post the draft in #post-feedback and direct reviews to the Slack thread.

04

Revisions & Feedback

Allow a 48-hour feedback window. Upload draft updates directly to the thread.

05

Final Review & Approval

Incorporate feedback. Obtain final approval from Bree or faculty before going live.

Future of Social Media Initiative

Next Steps

- Getting people interested in participating in all content streams
- Recruit People to be part of the social media initiative
- Brainstorm and think about the use of LinkedIn Analytics
- Need to finalize the announcement protocols when the drafts get posted in Slack for feedback
- Need to validate the 48 hour window feedback cycle

Post Presentation Comments

Q: How do you validate the outreach increased based on these content streams?

A: The growth of the LinkedIn Group and likes/comments can be analyzed in the future. Being the second semester of the initiative, we just need better procedures in place (this semester's work). Then, more posts can be created in each content stream. Finally, we can analyze how they're doing and the growth from
